SUMMARY

Full Stack Software Engineer with 3.5+ years building enterprise-grade, high-availability products in **Node.js, TypeScript, Angular (v15+) and React** on **AWS (EC2, S3, RDS, Lambda)**. Ship containerized microservices with Docker/Kubernetes through **Jenkins CI/CD** pipelines, with message-driven inter-process communication (RabbitMQ, Kafka, Socket.IO) and 90–95% unit-test coverage. Thrive in **fast-paced, deadline-driven Agile teams** – led a backend team, work in Agile/Scrum with Jira, and own features end-to-end on customer-interaction platforms serving 300+ enterprise customers.

EDUCATION

- G. H. Patel College of Engineering and Technology** Gujarat, India
Bachelor of Technology - Information Technology; CGPA: 8.4 January 2019 – December 2022
Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases

SKILLS SUMMARY

- Languages:** TypeScript, JavaScript (ES6+), Go, Python, SQL, HTML, CSS
- Frameworks:** Node.js, Express, NestJS, Django, Angular (v15+ / latest), React.js (incl. Micro-Frontend), Socket.IO
- Cloud & AWS:** AWS – EC2, S3, RDS, Lambda, IAM, CloudWatch; GCP (Compute Engine, Cloud Storage); Terraform (IaC)
- DevOps & CI/CD:** Docker, Kubernetes (deployments, services, config maps, rolling updates), **Jenkins CI/CD pipelines**, automated build & release to AWS, Grafana, Prometheus, production monitoring & alerting
- Databases & Messaging:** PostgreSQL, MongoDB, MySQL, Redis, Solr (Search Platform), Vector Databases, RabbitMQ, Apache Kafka – Data Modeling & Query Optimization
- Engineering Fundamentals:** Data Structures & Algorithms, Object-Oriented Design & Design Patterns, System Design (HLD/LLD), Distributed Systems, Microservices, Inter-Process Communication, REST APIs
- Testing & Practices:** Unit & Integration Testing (Jest, Supertest), TDD, Git, Agile/Scrum, Jira, Code Review, Performance Optimization, Security & Data-Privacy Best Practices
- AI / LLM Engineering:** OpenAI, Google Gemini, Sarvam AI APIs integrated into production features; **RAG (Retrieval-Augmented Generation) pipelines with LangChain and vector databases**; AI coding assistants (Claude Code) for code generation, refactoring, debugging, and documentation
- Currently Learning:** Snowflake (data warehousing & SQL analytics), Playwright test automation, Java Spring Boot fundamentals
- Soft Skills:** Ownership, Team Leadership, Written & Spoken English, Public Speaking, Time Management, Critical Thinking

EXPERIENCE

- Lifemaan** Hybrid
Full Stack Software Engineer October 2025 – Current
 - Key Contributions:** Own full-stack feature delivery end-to-end on Lifemaan’s Hospital Information Management System (HIMS), used by **300+ hospitals**, across an **Angular 15** desktop client (Electron-packaged) and a **Node.js/Express/MongoDB** backend spanning OPD, IPD, pharmacy, laboratory, and radiology modules. Architected LLM/AI integrations (OpenAI, Google Gemini, Sarvam AI) for AI-assisted clinical documentation, plus biometric face-recognition and OCR-based document capture.
 - Cloud, CI/CD & Reliability:** Built real-time, high-interaction-volume features with **Socket.IO**, drove India’s NDHM/ABHA health-data integration, and designed an automated **AWS S3**-backed release/auto-update pipeline that ships new desktop-client versions to 300+ hospitals with zero manual intervention – backed by **Prometheus/Grafana** dashboards and alerting for production reliability.
 - Pace & Ownership:** Operate in a **fast-paced environment with short, deadline-driven release cycles**, taking features from requirement to production independently across frontend, backend and deployment, while supporting live hospital operations where downtime is not an option.
 - Quality & Security:** Maintain **90–95% Jest unit-test coverage** on new backend code, enforce strict healthcare data-privacy and security standards (no patient-identifiable data in logs, compliant data handling), and drive code reviews across the Angular/Node.js codebase.
- Eminence Innovation** Hybrid
Software Engineer (Full-time) July 2024 – October 2025
 - Key Contributions:** Led the backend team building a real-money opinion-trading platform (Probo-style) on **Node.js, Angular, RabbitMQ, MongoDB and Redis**, designing message-driven inter-process communication to keep order matching and settlement consistent under concurrent load.
 - Architecture & Delivery:** Owned **HLD and LLD** for a large-user-base system, containerized services with **Docker** and deployed on **AWS** for consistent cross-environment releases, and tuned backend architecture for throughput, latency and resilience. Ran the team through **aggressive delivery deadlines** in an Agile workflow – sprint planning, code review and rapid iteration on production feedback.

- Saleshandy** Hybrid
Software Engineer (Full-time) *April 2024 – July 2024*
 - Key Contributions:** Redesigned core customer-facing modules of a sales-engagement platform using **React (Micro-Frontend)** and **NestJS/TypeScript**, including email forecasting and analytics, and migrated data from MySQL to **PostgreSQL** with measurable query-performance gains. Led development of the Lead Finder feature and debugged production issues via **Grafana** dashboards.
 - Cloud & Messaging:** Used **GCP and AWS S3** for file management, optimized SQL performance, and implemented **RabbitMQ** for load balancing across workers. Deepened **TypeScript** and NestJS expertise for scalable, strongly-typed application development.
- Rapidops Inc.** On-Site
Jr. Software Engineer (Full-time) *January 2023 – April 2024*
 - Key Contributions:** Developed, tested and maintained enterprise applications in **JavaScript/Node.js**, and re-implemented a production microservice from Node.js to **Go** for performance. Collaborated with senior engineers on scalable **AWS** solutions using **EC2, S3, RDS and Lambda**, and built responsive, dynamic user interfaces with **React.js**.
 - Payments:** Built and maintained a **Django**-based payment service handling transaction processing and reconciliation, integrated with the broader Node.js/Go microservice ecosystem.
 - Code Quality & Testing:** Wrote clean, maintainable, well-tested code and participated actively in code reviews to raise quality and promote best practices; documented development processes and workflows for the team.
 - CI/CD & Troubleshooting:** Partnered with the DevOps team on **Jenkins CI/CD** pipelines for automated build, test and deployment to **AWS**, and debugged/resolved production issues under **tight deadlines** to maintain application performance while integrating third-party services and APIs.

PROJECTS

- IntuScribe - AI Clinical Scribing Assistant (Personal Project):** Building an AI-powered clinical scribing tool, inspired by HeidiHealth, that transcribes doctor-patient conversations and auto-generates structured clinical notes in real time. Implemented a **RAG (Retrieval-Augmented Generation)** pipeline with **LangChain** and a **vector database** to ground note generation in prior patient history and reference documents. Spans a web app with a live AI pipeline (currently deployed), a desktop capture tool with camera-based document capture, and a browser extension, sharing a common notes engine (IntuNotes).
- E-commerce Platform (Amazon Clone):** Built an e-commerce platform replicating core Amazon functionality using a **microservices architecture**: product listing, authentication, cart, and order management. Used **Kafka** for async inter-service messaging, **Redis** for caching, **NestJS** for the server, MongoDB for product/user data, and SQL for transactions.
- Unibox - Centralized Email Management Platform:** Developed a unified platform enabling users to manage and send emails from a single interface, with scoped, role-based permissions so team members only access designated prospect lists. Integrated Gmail, Microsoft, and SMTP APIs for seamless email operations. Technologies: Express.js, MySQL, Redis.
- Learning Management System (LMS):** Designed an LMS in Node.js enabling teachers to manage content and students to stream videos, with recommendation-based search and a teacher analytics dashboard. Implemented **Apache Solr** for advanced, accurate search.
